

SPEECH SOLUTIONS

- **Fusion Expert – Front End Speech Recognition**

Dolbey's Fusion Suite™ completes the circle of transcription and dictation products with Fusion Expert® powered by Nuance's SpeechMagic™ for front-end speech recognition. Employ the power of this industry leading technology to maintain the cost and efficiency of your department.

Unlike other front-end products, Fusion Expert is not a separate system. It uses the same report formats, configurations, output distribution and interfaces as Fusion Speech® powered by Nuance's SpeechMagic™, its background counterpart.

- Faster turnaround time on report creation and signature
- Recognize the benefits of lower transcription costs and improved patient care
- Dictate and save "routines" for future use
- Migrate with ease between front-end and back-end recognition
- System is capable of being configured to integrate with a PACS system

- **Fusion Speech – Integrated Speech Recognition**

Speech recognition is the most significant technology development in the dictation and transcription industries. Without physician training, or changes in practice patterns, Fusion Speech® powered by Nuance's SpeechMagic™ harnesses this powerful technology for facility-wide deployment in nearly every medical specialty. Capture dictation with Fusion Voice®, process the dictation

through Fusion Speech, and boost transcription productivity in Fusion Text®. The Fusion modules drive cost savings in reoccurring labor and outsourcing fees. This is the speech recognition solution you have envisioned.

This technology has exceptional accuracy out of the box and requires no physician training. Utilizing voice files for “acoustical adaptation,” it learns with each dictation. Your transcription performance will increase dramatically while your healthcare providers enjoy faster document turnaround.

- **Fusion Speech – EMR**

Fusion SpeechEMR™ offers physicians the ability to utilize speech recognition within any EMR or third party application. The new feature of Fusion Expert® allows a physician to use speech recognition with recognized text inserted into almost any free form text area without the need of specialized integration to the third party application. By integrating Fusion SpeechEMR into Fusion Expert, physicians now have the ability to dictate into not only Fusion reports, but also medical reporting applications of any vendor or type. The Fusion Suite™ of products, which includes Fusion Expert, uses a single platform for any mode of physician dictation or speech recognition.

- **Fusion Speech – Voice2Text**

Fusion Voice2Text™ can allow dictators to record their dictations from a telephone or portable device without change in their work patterns. Voice2Text will perform speech recognition on the recordings after they are completed to produce a text document for editing and processing. Transcriptionist can edit the document if necessary and it easily integrates with your existing text or document management system.

- **Dragon Software**

Dragon is the world's best-selling speech recognition software. It turns your talk into text and can make virtually any computer task easier and faster. Contact DSSC
